COVID-19 VACCINATION BENEFITS MOM & BABIES

Did you know?

Pregnant people develop **high levels of protective antibodies** after vaccination against COVID-19.

Those antibodies are transferred to the fetus during pregnancy and to the newborn through breastmilk.

Transferred antibodies may protect babies from COVID-19 for six months or more after birth.

COVID-19 vaccination does not cause miscarriage or preterm birth or infertility, but getting COVID-19 might.

Getting COVID-19 while pregnant is very dangerous.

If you are pregnant or planning to be, it's time to get serious about the COVID-19 vaccine. Let's Talk!
